DETAILED ACTION

Status of Claims

1. This action is in response to.
2. Claims 1, 5-13, 15, 18, 19, 23, 25-29, and 32 have been amended.
3. Claims 36-47 have been added.
4. Claims 1, 2, 5-20, and 23-47 have been examined.

Allowable Subject Matter

5. Claims 1, 2, 5-20, and 23-47 are allowed. See Reasons for Allowance under separate heading.

Drawings

6. The drawings received on 26 January 2006 are accepted.

Information Disclosure Statement

7. The Information Disclosure Statements have been considered. Initialed copies of the Form 1449 are enclosed herewith.

Reasons For Allowance

8. The following is an Examiner's statement of reasons for allowance:

None of the art of record, taken individually or combination, disclose at least the method step of:

- *determining configuration maintenance requirements for maintaining a target configuration of an item of equipment;*
- *including establishing the target configuration of the item of equipment based on a design objective of the item of equipment, wherein the design objective includes safety, reliability, and performance, or a combination thereof;*
- *evaluating an actual configuration of the item of equipment;*
- *determining if the actual configuration complies with the target configuration;*
- *including planning an upgrade requirement for upgrading the actual configuration to the target configuration if the actual configuration is noncompliant*
- *coordinating the upgrade requirement and the predictive maintenance requirement into a combined maintenance schedule for both the upgrade requirement and the predictive maintenance requirement.*

More specifically, the prior art of record fails to disclose comparing a target configuration of an item with the actual configuration of a system to determine an upgrade plan for that system.

Independent claims 1 and 19 are distinguished over the closest prior art of Kroenke (Database Processing 1999), which teaches database processing in Chapter 1, pages 3-23, as well as file processing, instantiation of records, organizational context, and modeling of relational databases. As recited in independent claims 1 and 19, it is clear that the Applicant's invention is distinguished over the Kroenke invention in at least the method step of comparing actual and target configurations, and then formulating an upgrade plan to achieve compliance with then target configuration.

Conclusion

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
- Cornett et al. (US 5,216,612 A) discloses database implementation in column 25 line 26, where he describes using a database file structure to store part numbers, description status, and other noteworthy segments of information regarding computerized maintenance systems. See also the Figures 12a-22.
